gcc (using a script I made):

```
===== Cycle Count Summary for gcc.100k =====
Configuration                               Cycles
-----
Default (R=2, N=4)                          52048
R=4, N=4                                    41282
R=2, N=8                                    52048
R=4, N=8                                    41282
```

gobmk:

```
===== Cycle Count Summary for gobmk.100k =====
Configuration                               Cycles
-----
Default (R=2, N=4)                          54692
R=4, N=4                                    44442
R=2, N=8                                    54692
R=4, N=8                                    44441
```

hmmer:

```
===== Cycle Count Summary for hmmer.100k =====
Configuration                               Cycles
-----
Default (R=2, N=4)                          54633
R=4, N=4                                    44638
R=2, N=8                                    54633
R=4, N=8                                    44638
```

mcf:

```
===== Cycle Count Summary for mcf.100k =====  
Configuration                               Cycles  
-----  
Default (R=2, N=4)                         54025  
R=4, N=4                                    44389
